ECAD/MCAD COLLABORATION
Implementation Guidelines

prostep ivip Recommendation

ECAD/MCAD Collaboration
Implementation Guidelines
Abstract
This Implementation Guideline accompanies the prostep ivip PSI5 Recommendation for ECAD/MCAD-Collaboration.
Disclaimer

Prostep ivip Certification Guidelines (PSI Certification Guidelines) are available for general use. Anyone using these recommendations is responsible for ensuring that they are used correctly.

This PSI Certification Guidelines gives due consideration to the prevailing state-of-the-art at the time of publication. Anyone using PSI Certification Guidelines must assume responsibility for his or her actions and acts at their own risk. The prostep ivip Association and the parties involved in drawing up the PSI Certification Guidelines assume no liability whatsoever.

We request that anyone encountering an error or the possibility of an incorrect interpretation when using the PSI Recommendation should contact the prostep ivip Association (psi-issues@prostep.com) immediately so that any errors can be rectified.

Copyright

I. All rights on this PSI Documentation, in particular the copyright rights of use and sale such as the right to duplicate, distribute or publish the Documentation remain exclusively with the prostep ivip Association and its members.

II. The PSI Documentation may be duplicated and distributed unchanged, for instance for use in the context of creating software or services.

III. It is not permitted to change or edit this PSI Documentation.

IV. A suitable notice indicating the copyright owner and the restrictions on use must always appear.

Acknowledgment

Our thanks go to all the companies and their staff who were actively involved in drafting this recommendation and for the many constructive suggestions received. The following companies and research institutes were involved:

# Contents

## Table of Contents

1 General ........................................................................................................................................................... 9
  1.1 Objectives of the Implementation Guidelines .......................................................................................... 9
  1.2 Document structure .................................................................................................................................. 9

2 Overview of use cases ..................................................................................................................................... 10
  2.1 Use cases covered within implemener guidelines ................................................................................ 10
  2.2 Test cases .............................................................................................................................................. 11

3 Introduction to the EDMD protocol ............................................................................................................... 12
  3.1 Typical Workflows .................................................................................................................................. 14
    3.1.1 Basic EDMD Workflow .................................................................................................................... 14
    3.1.2 Enhanced EDMD Workflows ........................................................................................................... 15

4 Representation of an EDMDDataSet in XML ............................................................................................... 17
  4.1 Representation of an Item ..................................................................................................................... 18
    4.1.1 Defining an Item's position in the z-Axis ......................................................................................... 20
    4.1.2 Using the correct classification for an item ..................................................................................... 24
    4.1.3 Marking Items as Non-collaborative ................................................................................................ 28

5 EDMD Message Types ................................................................................................................................. 30
  5.1 The “SendInformation” message ........................................................................................................... 30
  5.2 The “SendChanges” message ................................................................................................................ 31
    5.2.1 Sending Proposed Changes using “SendChanges” ....................................................................... 31
    5.2.2 Responding to Proposed Changes using “SendChanges” ............................................................. 37
  5.3 Timestamps in EDMD messages .......................................................................................................... 39
  5.4 Transaction History in EDMD messages ............................................................................................... 41
  5.5 Sending EDMD Messages as Files ....................................................................................................... 43
    5.5.1 File Suffix ......................................................................................................................................... 43
    5.5.2 Use of message file compression (*.idz) ......................................................................................... 43
    5.5.3 File Naming and Folder Usage ....................................................................................................... 43

6 How to model specific ECAD features in EDMD .......................................................................................... 44
  6.1 How to model the Board ......................................................................................................................... 45
    6.1.1 Describing a simple Board in EDMD ............................................................................................... 45
    6.1.2 Describing Boards in terms of their Layers ..................................................................................... 48
  6.2 How to model Components ................................................................................................................... 70
  6.3 How to model Mounting Holes (Plated and non-plated) ........................................................................ 82
  6.4 How to model a Milled Cutout (Plated and non-plated) ......................................................................... 86
  6.5 How to model Keep-Out and Keep-In areas .......................................................................................... 90
  6.6 How to model Placement Group areas .................................................................................................. 95
  6.7 How to model “Other Outlines” or User areas ....................................................................................... 97
6.8 How to represent Traces, Copper areas and Silkscreen.......................................................... 100
6.9 Summary of all Item Types ........................................................................................................ 106
6.10 Mapping IDF Items to EDMD Items .......................................................................................... 111
7 Describing Geometry in EDMD ...................................................................................................... 112
  7.1 Representing the shape of an item in “2.5 D” .............................................................................. 112
    7.1.1 XML representation of an EDMDArc .................................................................................. 117
    7.1.2 XML representation of an EDMDSplineCurve ................................................................. 118
    7.1.3 Instantiation of an EDMDCircle3Point ............................................................................. 119
    7.1.4 XML representation of an EDMDCircleCenter ................................................................. 120
    7.1.5 XML representation of an EDMDEllipse .......................................................................... 121
    7.1.6 XML representation of an EDMDParabola ...................................................................... 122
    7.1.7 XML representation of an EDMDPolyLine ...................................................................... 123
    7.1.8 XML representation of an EDMDCCompositeCurve ...................................................... 124
    7.1.9 Representation of the shape of an item as external file .................................................... 125
    7.1.10 XML representation of items of a PCB board (example) .............................................. 126
8 Instantiation of test cases ............................................................................................................... 129
  8.1 Test Case 1-1: “Support of shape representations” ..................................................................... 129
  8.2 Test Case 1-2: “Definition of board baseline B” ....................................................................... 129
  8.3 Test Case 2-1: Addition of new items (Change 1) ................................................................... 130
  8.4 Test case 2-2: Removal of items (Change 2) .......................................................................... 131
  8.5 Test case 2-3: Movement of items (Change 3) ....................................................................... 132
  8.6 Test case 2-4: Modification of items (Change 4) ................................................................... 133
  8.7 Test case 2-5: Replacement of items (Change 5) ................................................................... 134
9 Terms for EDMD properties ........................................................................................................... 136
